This would allow the beam to reach the South Celestial Pole and provide a good overlap with the sky coverage of radio telescopes in the northern hemisphere. Making Waves. During the first decade, he worked practically alone because professional facilities ATNF. The correction was implemented in the electronic modulation and switching system that produced the quasi-continuous beam scan. Fellow, Institution of Engineers Australia White, F. With a diameter of 64 metres, Parkes is the largest single-dish telescope in the southern hemisphere dedicated to astronomy. He had a deep technical insight which he communicated with his work colleagues in a marvellously honest and intuitive way.
