External link. Learning Objectives By the end of this section, you will be able to: Describe the basic functions of the chemical senses Explain the basic functions of the somatosensory, nociceptive, and thermoceptive sensory systems Describe the basic functions of the vestibular, proprioceptive, and kinesthetic sensory systems. People with blindsight are usually not aware that they are reacting to visual stimuli. The temporal lobe, in particular the perirhinal cortex responds differently to stimuli which feel novel than to things which feel familiar. Pain is an unpleasant experience that involves both physical and psychological components. Some neurons in the nose are specialized to detect pheromones. This type of perception is the process by which the brain makes sense of these incoming data, mixing memory, emotion, and cognition into the experience. Basic Books.
