Afterwards we are going to discuss CR-WSN merits and challenges regarding structure, power consumption, security. Moreover, fixed spectrum allocation prevents rarely used frequencies those assigned to specific services from being used, even when any unlicensed users would not cause noticeable interference to the assigned service. Cooperative spectrum sensing in CR networks.

Cooperativecommunicationsforcognitiveradionetworks.Routingprotoco His current research interests are in the fields of ultra wideband communications, software defined and cognitive radio, signal analysis, pattern recognition, network capacity optimization and dynamic channel allocation. We have found that cooperative spectrum sensing is not only advantageous but is also essential to avoid interference with any primary network users.
